# Data Managment Centre

**Park** with ease

**Parking Heaven**

# The Data Management Centre

The Data management centre is a scalable car paring back office system. Designed to compliment our on site kiosks, but equally at home processing handwritten tickets and data from our handheld devices.
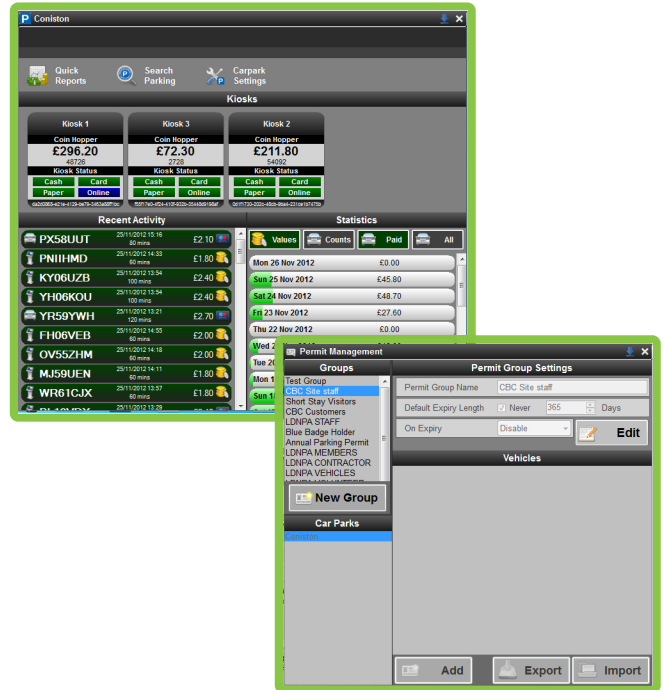

## Take Control ....

Park With Ease DMC allows car park operators to fully take control of their car parks. Allowing full control of parking terminals, enforcement processes, and handheld devices the system provides a complete management tool.

## Parking Station Management

Utilising functionality of the DMC parking managers can easily access information about sites. Quickly available information shows visitors numbers, cash in kiosk, kiosk status, as well as a full range of statistics.

## Enforcement Management

The enforcement module of the DMC, quickly allows parking managers to see offenders in the car park. Utilising data supplied via our car park kiosk, or alternately from our handheld device. Using an easy stage by stage process, letters are automatically printed to be sent to offenders. Integration to DVLA is provided for seamless processing. In addition the system also handles appeals as they are logged and flags them for review.

## Key Features

- Fully scalable reporting
- DVLA Link
- Kiosk Management
- Offender & Appeal management
